

# ZYPITAMAG® (pitavastatin)

## A THIRD-GENERATION STATIN FOR LOWERING CHOLESTEROL

### WHY YOU SHOULD TRY ZYPITAMAG®

#### 1. Low Myalgia (muscle pain) Rate — Only 3.1%

Muscle pain is the main reason reason people stop taking statins.

Zypitamag has a 3.1% myalgia rate. This may partly relate to its low dosing (2 mg and 4 mg) and the way it is processed in the body, which differs from other statins.

#### 2. Less CoQ10 Depletion (possible muscle symptom benefit)

Some theories suggest muscle symptoms may be linked to CoQ10 depletion. CoQ10 is involved in energy production in muscles and the brain. Lower levels may contribute to muscle symptoms for some people.

In head-to-head comparisons:

- Zypitamag: -7.7% reduction
- Atorvastatin: -26.1% reduction

Zypitamag's smaller reduction in CoQ10 may contribute to its superior tolerability in patients who experienced muscle pain with other statins.

### WHY THIS MATTERS

If you've had muscle symptoms on other statins, your body may still tolerate a different statin. Zypitamag is often used as an alternative for patients who could not stay on atorvastatin, simvastatin, or other statins.

According to cardiologist and lipid specialist **Dr. Nate Lebowitz\***,

**"The majority of statin intolerant patients will tolerate Zypitamag."**

This aligns with clinical research showing pitavastatin's intolerance rates.

**\$39** /month or less

### 3. Powerful LDL-C Reduction – Up to 45%

At the 4 mg dose, Zypitamag can lower LDL-C by up to 45 which is often enough for many patients to reach their targets when combined with lifestyle changes.

### 4. Fewer Drug & Food Interactions

Many statins are cleared through the same liver pathway (CYP450) that handles other drugs and even some foods (like grapefruit). This overlap can raise statin levels in the blood, increasing the chance of side effects.

Zypitamag uses a different metabolic pathway, leading to fewer drug and food interactions. This can be especially helpful if you:

- Take multiple medications (for blood pressure, diabetes, etc.)
- Are older and more likely to be on complex regimens

### 5. Minimal Impact on Blood Sugar

All statins can raise blood glucose; an important concern for people with diabetes or pre diabetes. Zypitamag has a much smaller increase compared with atorvastatin.

- Zypitamag: 2.1% increase
- Atorvastatin: 7.2% increase

This makes Zypitamag a strong option for patients who need LDL-C control without worsening blood sugar.

#### ZYPITAMAG IS IDEAL FOR THOSE WHO:

- Have had issues with other cholesterol lowering medications
- Take multiple medications
- Need LDL-C lowering without high doses
- Are concerned about blood sugar increases
- Want well tolerated treatment backed by clinical evidence
